The war to free science

How librarians, pirates, and funders are liberating the world's academic research from paywalls.

The **27,500 scientists** who work for the University of California generate **10 percent** of all the academic research papers published in the United States.

Last week, Proposition 200 was passed allowing all scientists to hold full copyright over all forms of research dissemination. These include articles, conference presentations and white papers. The decision followed protests preceding the vote in California. Rui Li, the president of *Science* shared with us that the ultimate goal of the organization was to pass it nationwide.

Internet Knowledge Distributors, Inc. Will Expand Its Program for Free E-Books to College Students

Martin Perez Comiso, IKD representative, hopes that free textbooks will improve higher education access internationally.

After several months of debate with the board of directors, Internet Knowledge Distributors, Inc. representative Martin Perez Comiso reports that free textbooks will be available to college students in 25 states. Arizona State University was the first to collaborate with Internet Archive in 2027, in an innovative attempt at making books more affordable to students.

Academic Life - Student Life on Campus

Why students aren't taking classes this fall

A U.S. Census survey of households with college students revealed that many dropped out of school this fall because they didn't want to take virtual classes, they were concerned about catching covid-19, or the family lost a job and income.

Note: Households could indicate multiple reasons for dropping out.
